S-Network Emerging Infrastructure Builders IndexSM Facts and Statistics

Index Description. The S-Network Emerging Infrastructure Builders IndexSM (TICKER: EIBI) is a composite equity index designed to serve as an equity benchmark for globally traded stocks that are engaged in the construction of heavy infrastructure projects in middle income and emerging markets. The index comprises companies in six primary sectors: a) Construction and Engineering; b) Construction Equipment; c) Construction Materials; d) Steel; e) Heavy Electrical e) Natural Resources. EIBI is a globally inclusive index that is tilted to emphasize middle income and emerging markets, which strives to capture all publicly traded companies that meet the index's eligibility criteria.

Inclusion Criteria. With the exception of Natural Resources, all companies contained in the EIBI are categorized as being "principally" engaged in the business of infrastructure building. For the purposes of the EIBI, a principally engaged company must generate approximately 50% or more of its revenues from infrastructure development, with emphasis on large-scale projects. Homebuilders are excluded from the index. EIBI contains stocks selected from a universe of equity securities traded on recognized stock exchanges that provide a "last closing price" in a) the Americas, b) Europe, Middle East & Africa (EMEA), c) Asia/Pacific, and d) South & Central America, based on a set of objective screening criteria. The selection criteria include requirements for industry participation, primary exchange listing, minimum capitalization, minimum free float, minimum price and minimum average daily trading volume.

Weighting Methodology. EIBI employs modified capitalization weighting methodology, adjusted for free float. Adjustments are also made to the index based on the categorization of the index companies as either a) large cap, b) mid-cap, or c) small-cap.

Rebalancings. EIBI is rebalanced quarterly on the third Friday of the last month of each calendar quarter, based upon closing prices as of the prior Friday. Index sector weights are fixed at their original weights at each rebalancing.

Index Data. EIBI contains 66 constituents and is calculated in real time by S&P Custom Indexes. Index values are distributed throughout the day at fifteen-second intervals via the Consolidated Tape Association (Tape B) in both USD and EUR. EIBI is calculated on both a price only and total return basis. Daily values from December 31, 2004 are available on the Infrastructure Builders Indexes website and from various data vendors.

Top Ten Constituents

Company Name	Ticker	Sector	Weight
ABB LTD.	ABB SS	Heavy Electrical Equipment	4.5455
